PROFESSIONAL SUMMARY

B.Tech Computer Science graduate and backend developer with 20 months of experience designing scalable Java applications, REST APIs, and database integrations. Adept at building robust internal services and integrating complex enterprise systems to streamline data workflows. Highly motivated to leverage software engineering expertise in a platform role to drive infrastructure automation, enhance CI/CD processes, and improve the overall developer experience.

EDUCATION

Kakatiya Institute of Technology and Science

May 2020 – May 2024

Bachelor of Technology in Computer Science | CGPA: 8.47/10.0 | Warangal, Telangana

EXPERIENCE

Genpact | Senior Associate — Java Backend Developer

August 2024 – Present

Client: GE Vernova | Project: AeroAlliance Platform | Hyderabad, India

- Developed and enhanced RESTful APIs and microservices using Java and Spring Boot to build maintainable backend features and internal services for an enterprise Cloud SaaS platform.
- Implemented pagination and sorting with Spring Data JPA to optimize query performance, streamlining backend data workflows and reducing system memory overhead for large datasets.
- Collaborated with an Angular and JavaScript frontend team to resolve integration issues, building full-stack familiarity by debugging frontend-backend API mismatches to deliver cross-functional platform fixes.
- Resolved critical Docker build failures by migrating deprecated base images across microservices, conducting root-cause analysis to eliminate production defects and standardize configuration project-wide.
- Integrated New Relic monitoring scripts across microservices to configure system downtime alerts, enhancing production reliability and platform operational efficiency.
- Maintained version control and continuous integration workflows using GitHub and Jenkins to support stable application delivery within Agile sprints.
- Supported cloud environments using AWS ECS, EC2, S3, VPC, and CloudWatch to monitor production uptime and troubleshoot infrastructure deployment issues.
- Wrote and optimized SQL queries in PostgreSQL for backend data access, utilizing DBeaver for query analysis and relational data modeling across production schemas.
- Conducted functional testing of agentic AI systems executing multi-step autonomous tasks, identifying workflow gaps and gaining exposure to AI-driven software environments.

TECHNICAL SKILLS

Languages:	Java (Primary), Python (Familiar), JavaScript, Angular (Working Knowledge), SQL
Frameworks:	Spring Boot, Spring Data JPA, REST APIs, Microservices
Fundamentals:	Object-Oriented Programming, Data Structures, Algorithms
Databases:	PostgreSQL query writing, optimization, relational data modeling
Cloud / AWS:	ECS, EC2, S3, VPC, CloudWatch (Cloud SaaS deployments)

DevOps & Tools: Docker, Jenkins, GitHub, DBeaver, PuTTY, New Relic

AI & Automation: Agentic AI systems testing, AI coding assistants

CERTIFICATIONS

- Java Full Stack – Wipro
